

Planning and Scheduling

Component
École Nationale
Supérieure
d'Électrotechnique
d'Électronique

In brief

- **Ametys Code:** N9EE18C
- **Open to exchange students:** Yes

Presentation

Objectives

- Know the tools and methods for solving the main types of scheduling problems
 - Know when and how to apply them
-

Description

Scheduling involves assigning tasks to resources and over time in order to optimize a given criterion, while respecting constraints. This course covers the challenges and methods of planning and scheduling in systems (production, logistics, IT, etc.).

Pre-requisites

combinatorial optimization
